

EDUCATION

Master of Science in Computer Science, Can Tho University	2025 – Present
Bachelor of Engineering in Computer Science, Can Tho University	GPA: 3.3/4.0 2020 – 2025

SKILLS

Programming Languages & Markup: Python, JavaScript, HTML, CSS.
Frameworks & Other: Node.js, Vue.js, Next.js, MongoDB, YOLO, Keras, Scikit-learn.
English Proficiency: VSTEP B2 (06/2025).

EXPERIENCE

Intern, CUSC (Can Tho University Software Center)	05/2024 - 07/2024
✓ Developed an AI model for recognizing littering behavior, achieving 81.52% accuracy. ✓ Trained YOLO model and a CNN + LSTM classification model. Deployed the model using Streamlit.	
AI Engineer Freelancer	04/2025 - now
✓ Worked on computer vision projects involving object detection, image classification, and object tracking, including traditional costume recognition, traffic density estimation, and football match analysis. ✓ Conducted extensive research to propose effective solutions, trained AI models, and implemented algorithms for system integration.	

PROJECTS

ViFLAVOR: Vietnamese Specialty Cuisine Identification via Ingredient Priority Order	
✓ Developed a web application to identify Vietnamese specialty dishes from images by detecting ingredients using state-of-the-art object detection models (YOLOv8, YOLOv9, RT-DETR). ✓ Proposed the novel D2D (Distance to Decide) algorithm, achieving over 94% accuracy in dish recognition. ✓ Published and presented the work at the FAIR (Fundamental and Applied IT Research) Conference 2024. ✓ GitHub: https://github.com/dohieunghia2002/Identify_Vietnamese_Dishes Paper: FAIR 2024 Publication	
Exploring Distillation Models for Cultural Heritage Preservation: Traditional Vietnamese Instruments	
✓ Conducted research on distillation models for the preservation of cultural heritage, focusing on traditional Vietnamese musical instruments. Developed a unique annotated dataset and compared models like Vision Transformers (ViT) and Convolutional Neural Networks (CNN). The research aimed to identify lightweight models that balance accuracy and computational efficiency, ensuring practical applications in cultural heritage management. ✓ Github: https://github.com/dohieunghia2002/DistillationModels-ViTIP ✓ Paper: FDSE 2024 Our Paper
